1	Bag	H Clips	
1	Box	Nails 2.5"	
		Venting Pipe + Bath roof vent	
		Tarp Required Y N	

I agree to the above quantities being delivered to my address a minimum of 3 days prior to the scheduled production. I understand that smaller items such as the boxes of nails and various other boxes may be placed in the garage and/or covered porch area to avoid damage, any plywood delivered will be tarped if there is impending rain or snow. All orders will be checked in within 24 hours of being delivered and signed off by your AEGC representative to verify all items have been delivered to avoid production delays. Production is contingent upon an accurate delivery, and does play a part in the production schedule.

Production schedule may still be limited by the weather conditions as well as any underlying conditions that are uncovered upon tear off of roofing material, i.e. rotted decking which may extend production by an additional day or two. If production is delayed after roofing material is removed, roof will be tarped at no additional charge to you, in order to prevent further damage to the structure. We try and ensure insurance coverage for these situations, but in the event your policy does not have building code upgrade coverage, re-decking of the structure, if required, will be an out of pocket expense. If discovered, additional layers of shingles will be removed and will be charged back to the insurance company if a claim was filed. Your scope of work/change order and final invoice will reflect any of these additional changes. Payments for any upgrades purchased are due prior to production, when material is delivered on site. Any credits for items not completed will be deducted from final payment after job is completed. Entire ACV is due prior to production in order to release any depreciation due from insurance.
